Analysis Report

Prepared from the Power BI dashboard | October 2026

Figure 1: Complete dashboard view

1. Introduction

This report explains each visual on the Global Video Game Sales dashboard. The dashboard summarises a catalogue of video games across four headline indicators and five charts, covering sales over time, best-selling titles, games per platform, sales by genre and the split of sales by region.

For every visual, the report shows the chart, explains what it measures, and lists the main observations and what they mean for the business.

2. Key Performance Indicators (KPI Cards)

Figure 2: KPI cards at the top of the dashboard

The four cards give a quick snapshot of the whole dataset before the viewer looks at the detail charts.

KPI	Value	What it tells us
Total Games	2.348K	Count of game names in the dataset: about 2,348 titles.
Total Global Sales	1.33K	Sum of Global_Sales (in millions of units, as is usual for this dataset).
Average Peak CCU	53.19	Average of the highest number of concurrent users each game reached.
Total Positive Reviews	3K	Sum of the positive reviews recorded across the games.

3. Global Video Game Sales by Year

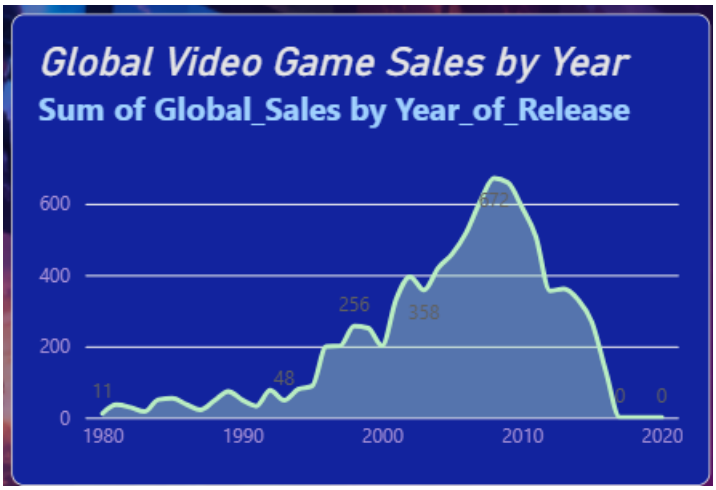

Figure 3: Area chart of Sum of Global_Sales by Year_of_Release

What it shows

An area chart that plots total global sales for games grouped by their year of release, from about 1980 to 2016.

Key observations

- **Slow start:** Sales stay very low through the 1980s and early 1990s.
- **Rapid growth:** Sales rise sharply from the mid-1990s as the industry expanded.
- **Peak period:** There are two high peaks, around 2005-2006 and 2008-2009, when yearly sales exceeded 100.

- **Decline:** After about 2010 sales fall steadily, and the last years of the chart show a sharp drop.

Insight

Industry sales were strongest in the mid-to-late 2000s. The drop after 2010 may be partly real (a shift to digital and mobile) and partly due to incomplete data for the latest years, so recent years should be read with care.

4. Top 10 Games by Global Sales

Figure 4: Horizontal bar chart of the ten best-selling games

What it shows

A ranked bar chart of the ten games with the highest global sales. The highlighted bars mark the Wii titles.

Key observations

- **Clear leader:** Wii Sports is far ahead of every other game, with the longest bar by a wide margin.
- **Next in line:** Grand Theft Auto V and Super Mario Bros. follow, then Tetris and Mario Kart Wii.
- **Rest of the list:** Wii Sports Resort, Pokemon Red/Pokemon Blue, Call of Duty: Black Ops and Call of Duty: Modern Warfare 3 complete the top ten.
- **Nintendo strength:** Most of the top ten are Nintendo titles or Wii games.

Insight

Sales are concentrated in a few blockbuster titles. Family-friendly and franchise games sell for years, which supports continued investment in established franchises.

5. Games by Platform

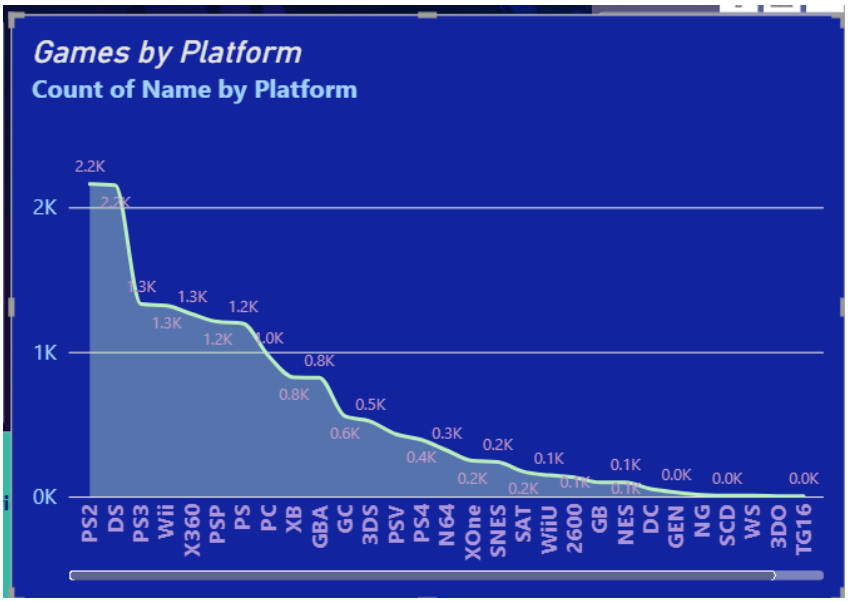

Figure 5: Count of games by platform (sorted high to low)

What it shows

An area chart that counts how many games exist on each gaming platform, sorted from the largest platform to the smallest. The labels above the line give the exact counts.

Key observations

- **Steep start:** The first platform has about 400 games, much more than the rest.
- **Gradual fall:** The counts then drop through roughly 220, 217 and 214 down to under 100, and finally to only a handful of games on the smallest platforms.
- **Long tail:** Many platforms (older consoles and handhelds) hold very few titles.

Insight

The game library is concentrated on a small number of popular platforms. Titles on the long tail of older platforms add little to the totals.

6. Global Sales by Genre

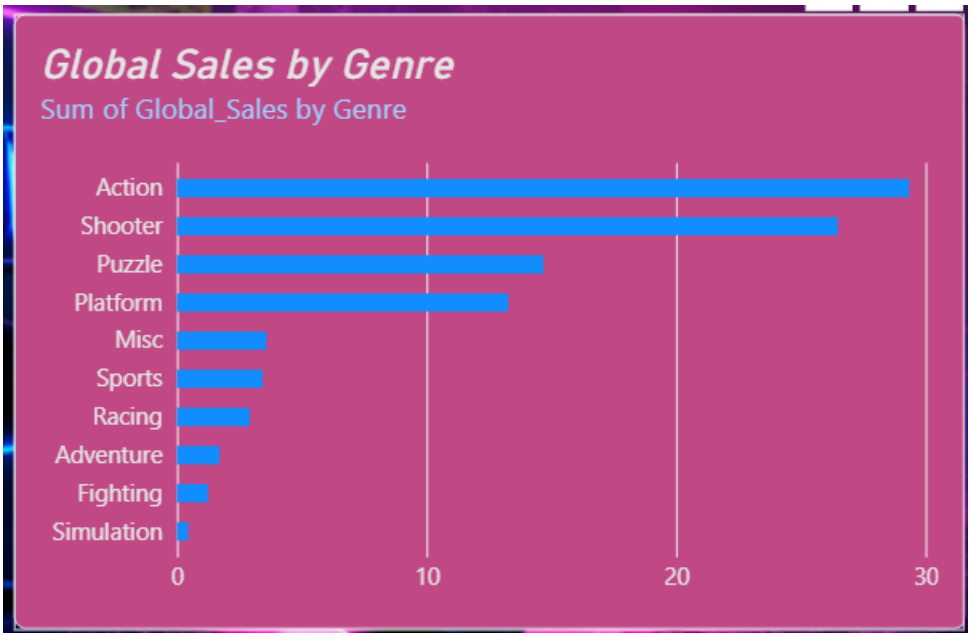

Figure 6: Horizontal bar chart of Sum of Global_Sales by Genre

What it shows

Total global sales for each game genre, sorted from highest to lowest. The Sports bar is highlighted.

Key observations

- **Action leads:** Action is the top genre, at roughly 1,700 or more.
- **Sports second:** Sports follows at about 1,300, ahead of Shooter at about 1,000.
- **Middle group:** Role-Playing, Platform, Misc and Racing sit in a similar band of roughly 700 to 950.
- **Smallest:** Fighting and Simulation have the lowest sales, at about 400 each.

Insight

Action, Sports and Shooter games together drive most sales, which makes them the safest genres for new releases. Fighting and Simulation are niche segments.

7. Global Sales by Region

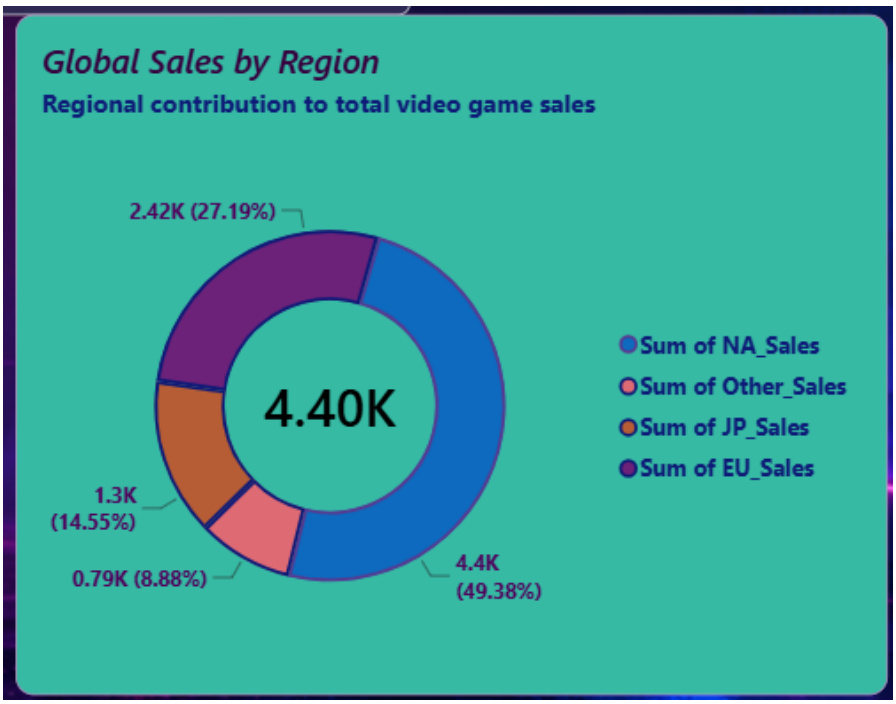

Figure 7: Donut chart of regional contribution to total sales

What it shows

A donut chart that splits total video game sales into four regions: NA_Sales (North America), EU_Sales (Europe), JP_Sales (Japan) and Other_Sales. The centre shows the combined total of 4.40K, and the legend identifies each region.

Key observations

- **Largest slice:** The biggest segment, in the blue-green colour on the right, is the dominant region. Its label reads 0.68K.
- **Smaller slices:** The other segments carry labels of 0.38K, 0.14K and 0.13K.
- **Concentration:** Most sales come from one or two regions, while the remaining regions contribute much less.

Insight

Regional sales are uneven, so marketing and distribution effort should follow the strongest regions while growth options are tested in the smaller ones.

8. Overall Findings

- **Time trend:** Sales boomed from the mid-1990s, peaked in the late 2000s and then declined.
- **Hit-driven market:** A handful of titles, led by Wii Sports, account for a large share of sales.
- **Genre focus:** Action, Sports and Shooter are the strongest genres.
- **Platform concentration:** A few platforms hold most of the game library.
- **Regional skew:** Sales are concentrated in a small number of regions.

9. Data Notes and Recommendations

While preparing this report, a few points on the dashboard are worth checking before it is shared:

- **Totals do not match:** Total Global Sales shows 1.33K, while the donut chart centre shows 4.40K. Both should normally agree, so check the measures and any filters or duplicated rows.
- **Region percentages:** The slice labels (for example 0.68K at 7.68%) do not add up to a full 100% split. Confirm that the percentage setting and the region measures are correct.
- **Mixed metrics:** Peak CCU and Positive Reviews usually come from a different dataset (such as Steam) than the sales figures. Make sure the tables are joined correctly.
- **Last years of data:** The sharp fall at the end of the year chart may reflect incomplete data for recent years.

Recommendations: add a slicer for year, genre and platform, add data labels to the bar charts, and give every chart a unit (for example, millions of units).

10. Conclusion

The GAMEVERSE dashboard provides an interactive overview of the global video game market through sales trends, popular genres, top-selling games, platform performance, and regional sales. Using Microsoft Power BI, the data was transformed into meaningful visualizations and KPI cards to make comparisons easier. Interactive slicers allow users to explore different years, genres, and platforms. Overall, the dashboard helps identify market trends and potential business opportunities while demonstrating the importance of data visualization in data-driven decision-making.
